Metrics:

Week	Number of commits	Emails	Use Cases Completed	Hours	Test Coverage
3	7	7	3	8	0%

Number of Commits:
The team will track number of commits to the master branch. This will be used to track not only how often features get worked on, but who is working on features.
Emails:
The number of emails to the client and between group members will be tracked as a way of ensuring constant communication. Email will be the primary form of communication outside of group meetings so information can be logged and reviewed later if necessary.
Use Cases Completed:
The team will develop use cases, and track how many use cases to a given feature are completed when that feature is worked on.
Hours per Week:
Hours of work a week, including debugging, research, prototyping, and actual development. This will be categorized in the end-of-sprint report (number of hours in each category per week).
Test Coverage:
Tracking the number of tests written for the features in a sprint and what parts of the features are covered.
